Summary:

Open Politics is the application of open source governance best practices in the scientific methodology public policies secure operations development (DevSecOps). It's being researched through my decades of works as an apartisan neutral technical legislative task forces, supreme courts amicus curiae, and executive power curatorial jury analyst and compiled for a scholar consultancy for the Brazil Federal Public Ministry (MPF) department of justice to be vastly reviewed for the Brazil Supreme Military Court (SCM) and Order of Lawyers of Brazil (OAB) 'Military Law' Summit. Its openly disclosed interest is the establishment of more transparently audited open houses of policymaking, even if the creation of an Open Party is needed for that.
